PRODUCTIVE PROCESS:	The ingredients making up the product are placed in a saline solution, used for brine. The jars that have been previously blown with steam at 100 ° C and washed with water and rinse aid are now filled with the product, capped and checked for tightness by the machine itself. The jars pass in the rain pasteurizer with an inlet temperature of 100 ° C and an outlet temperature of 40 ° C and remain there for a time proportionate to the size of the jar. We then move on to the labeling machine which automatically affixes the labels to the jars and the shrinkwrapper which places the transparent film as a cover for the bundle. The bundles are placed on the platform which remains ready for collection.
LABELING:	Labeling complies with Legislative Decree 1169/2011 and subsequent amendments.
DEADLINE:	T.M.C. : 36 MESI
LOT:	Very evident on each jar
